

Core Java

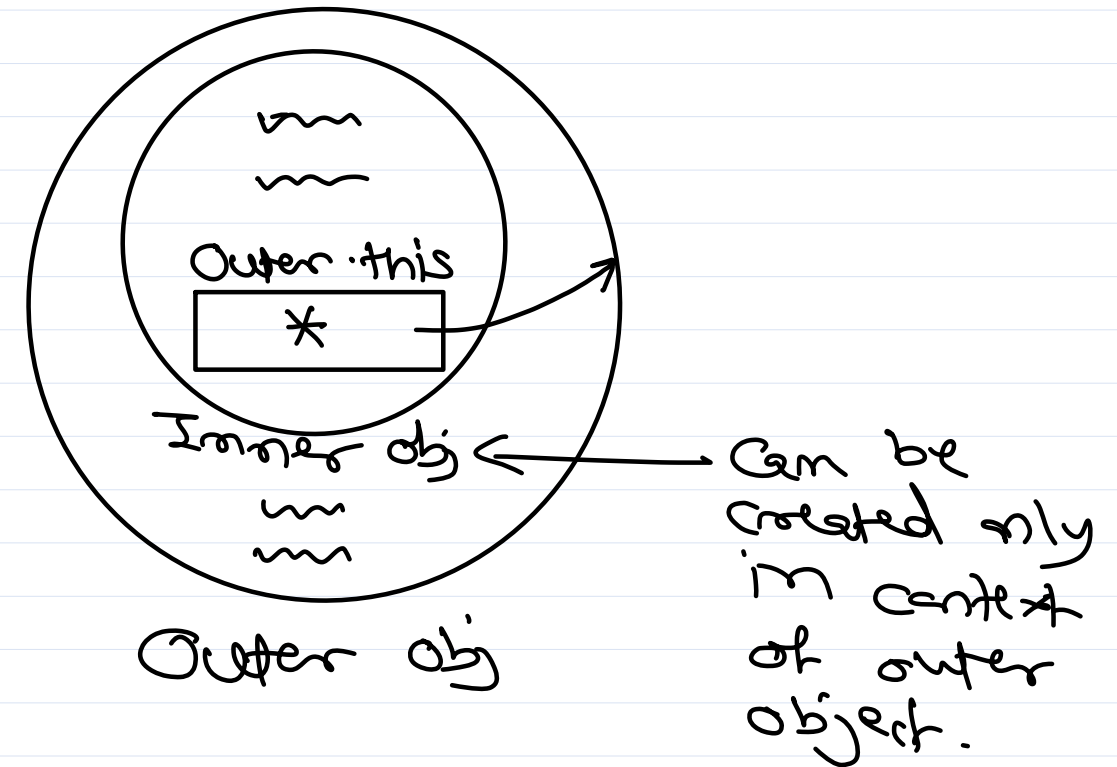

Trainer: Nilesh Ghule

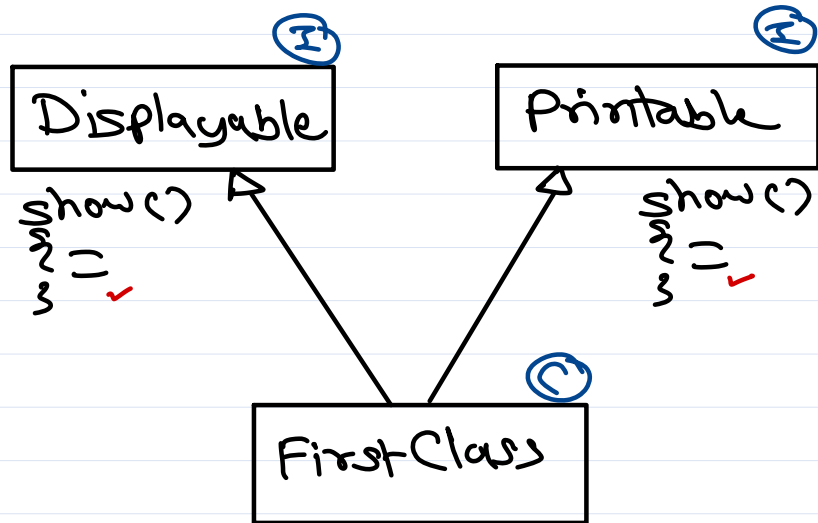

Static member class

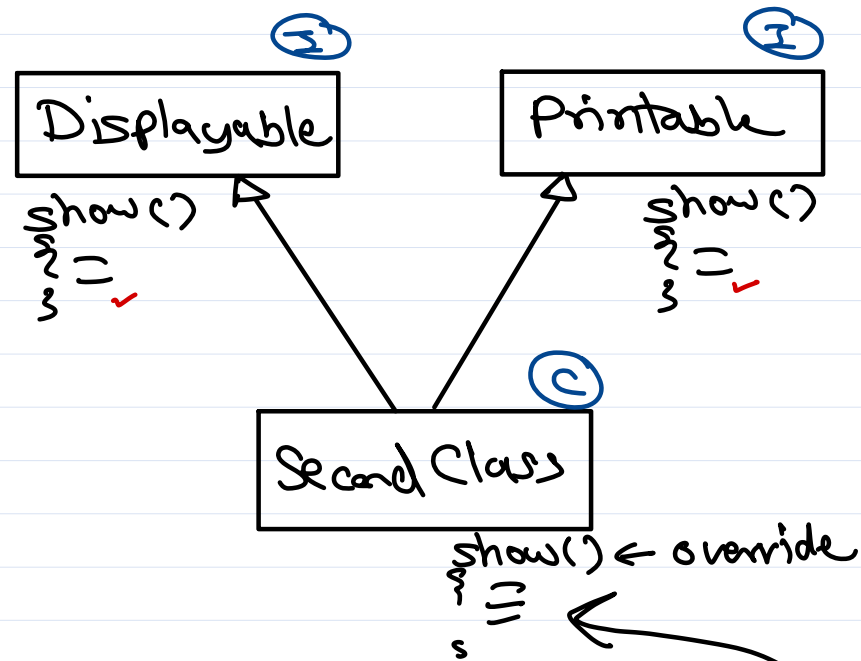

Non static member class

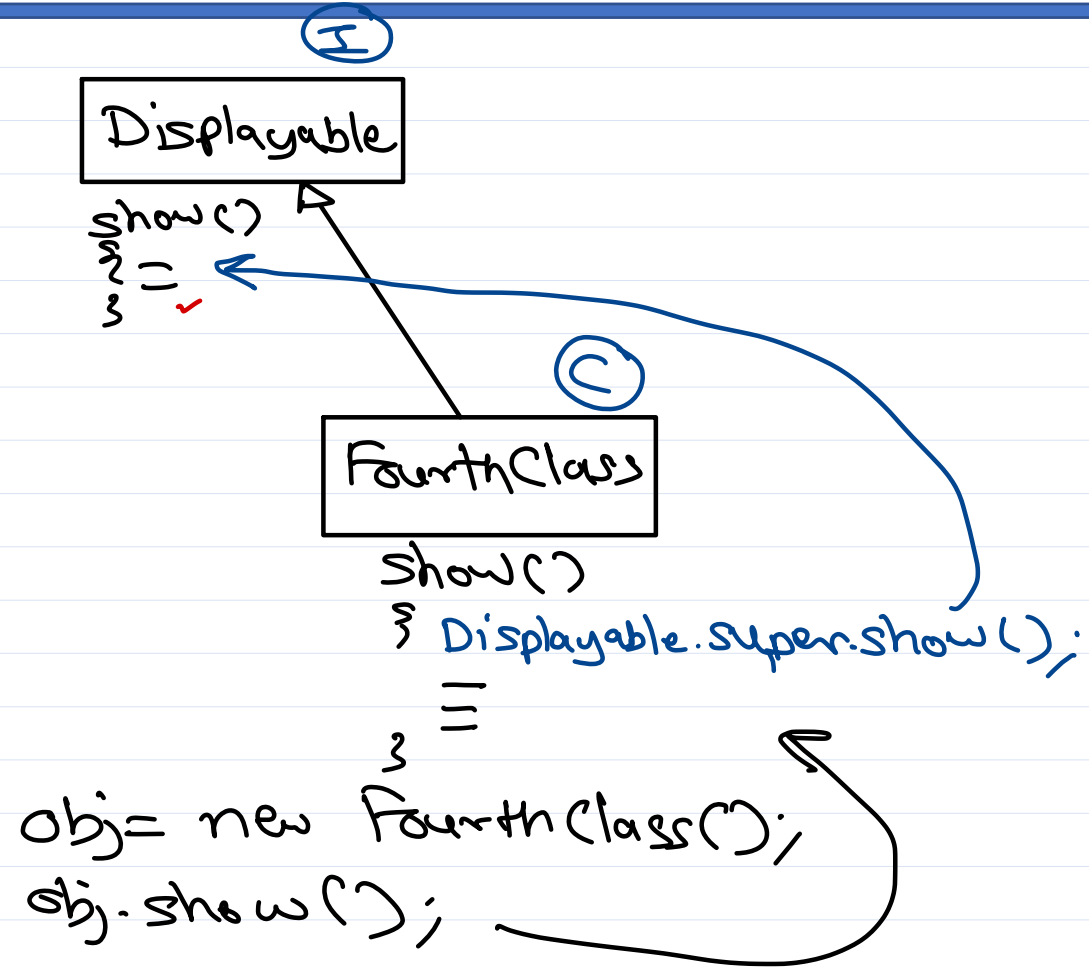

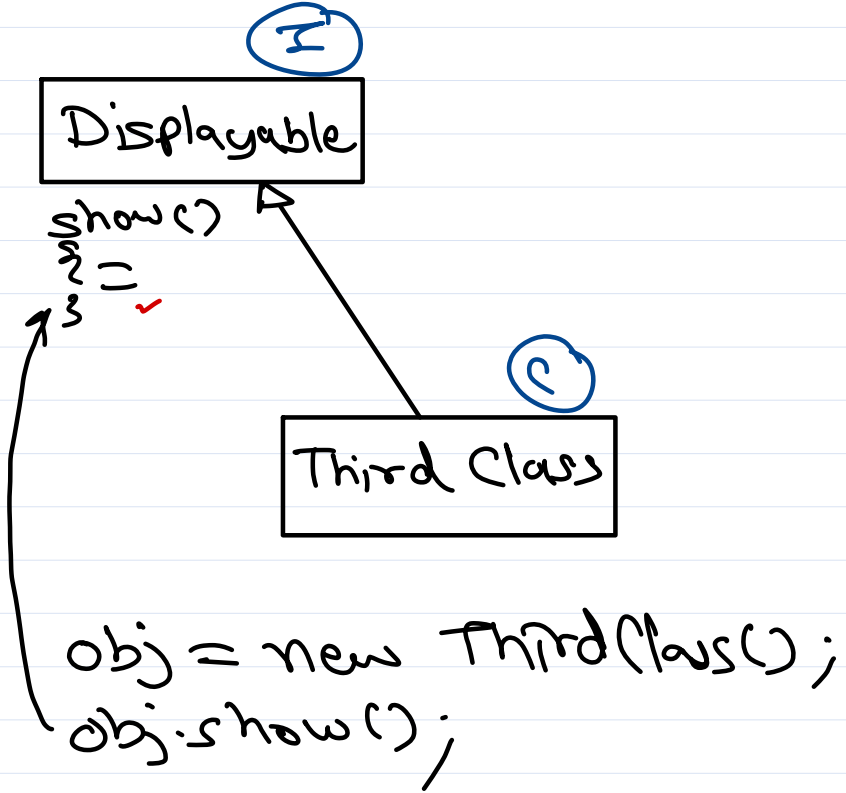

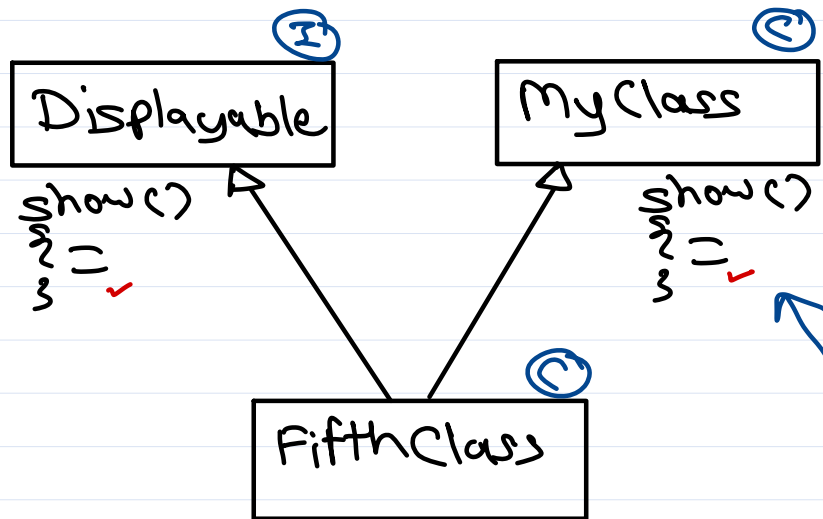

Compiler error.

obj = new SecondClass();
obj.show();

```
obj = new FifthClass();  
obj.show();
```

Super interfaces clash!
Super class wins!!

```
class List {
```

```
    static class Node {
```

```
        p: int data;  
        p: Node next;
```

```
    }  
    =
```

```
    p: Node head;
```

```
    void addFirst(int val) {  
        =
```

```
    }  
    void display() {  
        =
```

```
    }
```

```
    class Iterator {
```

```
        =
```

```
        next() { - }
```

```
    }
```

```
}
```

```
List.Node n = new List.Node();
```

```
List l = new List();
```

```
itr = l.new Iterator();
```

Thank you!
